

Job Site Ready Padmount

Product Data Sheet

File No.	PDS-036	Issued:	August 27, 2003
Availability:	Catalog	Supersedes:	N/A

Introduction

One of the strengths of Central Moloney, Inc. has always been our flexibility to adjust to the changing needs of the electric utility industry. We have worked extensively with utilities across the country in developing products and services where a need has been recognized.

We introduced a new product called the **JSRP - Job Site Ready Padmount** in August 2002, to meet the needs of this ever-changing industry. This new product is a fully loaded padmount transformer that ships direct from the factory completely ready for job site installation with components.

The **JSRP - Job Site Ready Padmount** is designed to have the padmount transformer, elbows, inserts, secondary connectors and composite mounting pad installed at the factory. The composite pad serves as both shipping pallet and permanent mounting pad. This product offers substantial cost savings by reducing inventory for all products, drastically reduces internal logistics and transformer requirements. Also, it reduces your contractor's installation costs by eliminating many of the steps they normally incur at the installation site.

JSRP - Job Site Ready Padmount Advantages

- Reduces systems inventory for all items
- One inclusive part number for transformer, elbows, inserts, secondary connectors and composite mounting pad
- Advantage for purchasing department by cutting only one purchase order instead of five for the different items
- Advantage for accounting department by processing only one invoice instead of five
- Logistics receives one unit not five
- No inventory requirements for five items, reduces workload at receiving department
- Eliminates off-loading process at utilities location and on-loading going to job sites
- Eliminates transportation from utilities' stores departments to job sites
- Composite mounting pad serves as both shipping pallet and permanent mounting pad, which eliminates disposal cost of shipping (wooden) pallet
- Advantage for contractor with one-step operation, eliminating the need to install components as all components are installed or located in the transformer

Central Moloney has built an established record of manufacturing quality transformers and we are constantly searching for new ways to improve the performance, reliability and cost effectiveness of our transformers. We are an ISO 9001:2000 certified company, which is another example of Central Moloney's leadership and commitment to the industry. It assures that every aspect of our manufacturing operation meets international standards and delivers proven quality.
